ABSTRACT: This paper deals with faunistic surveys on some families of Coleoptera from different regions of Iran. In total, 89 species of 13 families were collected and identified: Anthicidae (1 species), Anthribidae (2 species, 2 genera), Attelabidae (3 species, 3 genera), Brentidae (10 species, 9 genera), Carabidae (10 species, 10 genera), Clambidae (1 species), Curculionidae (42 species, 33 genera), Dasytidae (3 species, 2 genera), Hydrophilidae (1 species), Meloidae (5 species, 4 genera), Nemonychidae (1 species), Rhipiceridae (1 species) and Scarabaeidae (9 species, 8 genera).

KEY WORDS: Coleoptera, beetles, faunistic records, chorology, Iran.

Introduction

The Coleoptera are the largest order of insects and therefore the most diverse group of organisms on earth, comprising over 360,000 described

species (BOUCHARD & al. 2009). The oldest beetle fossils are from the Lower Permian, about 265 million years old (PONOMARENKO 1995). As such, beetles represent an excellent system for addressing a broad spectrum of evolutionary questions, particularly those pertaining to causes and correlates of diversification (LAWRENCE & al. 2011). The great morphological diversity of beetles has led to the proliferation of suprageneric taxa at various ranks (BOUCHARD & al. 2011). The aim of this paper is reporting the Coleoptera species which were collected from different regions of Iran.

Material and methods

The specimens of this research were collected from different regions of Iran and also some materials were obtained from insect collections deposited in some branches of Islamic Azad University, private collections and some museums. Data about classification, nomenclature and distribution data are mainly based on LÖBL & SMETANA (2006, 2007, 2010, 2011) and LÖBL & LÖBL (2015).

Results

Totally 89 species of 13 families of Coleoptera have been collected and identified from different regions of Iran, which of them 17 species are new records for the fauna of Iran: *Enedreytes hilaris* FÄHRAEUS, 1839 – Anthribidae; *Rhynchites (Rhynchites) lenaeus* FAUST, 1891 – Attelabidae; *Diplapion stolidum* (GERMAR, 1817), *Perapion (Perapion) oblongum* (GYLLENHAL, 1839), *Pseudoprotapion pseudelegantulum* (WAGNER, 1912) – Brentidae; *Bagous (Bagous) lutulentus* (GYLLENHAL, 1813), *Ceutorhynchus aeneicollis* GERMAR, 1823, *Chlorophanus caudatus* FÄHRAEUS, 1840, *Hexarthrum duplicatum* FOLWACZNY, 1966, *Neoprohinus cinnamomeus* (SCHULTZE, 1897), *Rhyncolus (Axenomimetes) heydeni* (FAUST, 1892), *Trachyphloeus (Trachyphloeus) alternans* GYLLENHAL, 1834 – Curculionidae; *Dasytes (Mesodasytes) nigroaeneus* KÜSTER, 1850 – Dasytidae; *Muzimes caucasicus* (MAŘAN, 1940), *Mylabris (Micrabris) inculta* (ESCHERICH, 1899) – Meloidae; *Nemonyx lepturoides* (FABRICIUS, 1801) – Nemonychidae and *Loraspis frater* (MULSANT & REY, 1870) – Scarabaeidae. The list of species is given below alphabetically.

Family Anthicidae*Anthicus balachanus* PIC, 1906

- Razavi Khorasan prov., Fariman, 35°69'N/59°84'E, X 2011, 1 ex., 1404 m.

Family Anthribidae*Dissoleucas niveirostris* (FABRICIUS, 1798)

- Chaharmahal & Bakhtiari prov., Kuhrang (Ghaleh-Bakhtiar), 32°25'27"N/50°16'06"E, 22 VIII 2003, 2 exx.

Enedreytes hilaris FÄHRAEUS, 1839

- West Azarbaijan prov., Myandoab (Qarehghozlu), 36°57'N/46°00'E, 6 VIII 2010, 1 ex. New record for Iran.

Family Attelabidae*Deporaus (Deporaus) betulae* (LINNAEUS, 1758)

- Mazandaran prov., Savadkuh, Kamerpesht, 35°58'23"N/53°3'42"E, 14 VII 2004, 2 exx.

Lasiorhynchites (Lasiorhynchites) cavifrons (GYLLENHAL, 1833)

- Guilan prov., Astara, Tileh-Khan, 38°23'N/48°49'E, IV 2000, 2 exx., on *Quercus petraea* (MATT.) (Fagaceae).

Rhynchites (Rhynchites) lenaeus FAUST, 1891

- West Azarbaijan prov., Ourmieh, Zeynaloo, 37°37'57"N/45°0'22"E, 13 IX 2007, 2 exx., 1612 m, on *Prunus* sp. (Rosaceae). New record for Iran.

Family Brentidae*Apion strigipenne* (SCHILSKY, 1902)

- Golestan prov., Golestan National Park, VI 2009, 2 exx.

Ceratapion (Angustapion) kasbekianum (GERSTAECKER, 1854)

- West Azarbaijan prov., Makoo, 39°19'N/44°48'E, IX 2012, 1 ex., 1730 m.

Diplapion stolidum (GERMAR, 1817)

- Mazandaran prov., Nur National Reserve, 36°34'51"N/52°02'56"E, 4 V 2010, 2 exx., 8 m. New record for Iran.

Nanophyes marmoratus marmoratus (GOEZE, 1777)

- Mazandaran prov., Tonekabon (Jangale), 36°38'N/50°49'E, 8 VII 1996, 3 exx.

Omphalapion dispar (GERMAR, 1817)

- Guilan prov., Lahijan, 37°14'N/50°02'E, IX 2011, 1 ex., 16 m.

Perapion (Perapion) curtirostre (GEFFNAR, 1817)

Discussion

The results of this research indicate that the fauna of Iranian Coleoptera is very diverse and on the other hand unknown. Regarding to the various geographical regions and climates in Iran, it is expected high species diversity of Coleoptera in different ecosystems of Iran. The previous faunistic surveys on Iranian Coleoptera by the authors (e.g. SAMIN & SAKENIN 2014; SAMIN 2015; SAMIN & al. 2015a, 2015b, 2016a, 2016b) prove that numerous new country records are remainder to be discovered. Most of the collected species in this research are phytophagous and some of them especially in the family Curculionidae are agricultural pests; so determining of the host plants and also their natural enemies can be invaluable research topics for the researchers.

STRESZCZENIE

Na podstawie obserwacji faunistycznych przeprowadzonych w różnych prowincjach Iranu podano informacje dotyczące 89 gatunków chrząszczy należących do 13 rodzin: Anthicidae (1 gat.), Anthribidae (2 gat.), Attelabidae (3 gat.), Brentidae (10 gat.), Carabidae (10 gat.), Clambidae (1 gat.), Curculionidae (42 gat.), Dasytidae (3 gat.), Hydrophilidae (1 gat.), Meloidae (5 gat.), Nemonychidae (1 gat.), Rhipiceridae (1 gat.) and Scarabaeidae (9 gat.). Siedemnaście gatunków zostało wykazanych z Iranu po raz pierwszy. Były to: *Enedreytes hilaris* FÄHRAEUS, 1839 – Anthribidae; *Rhynchites (Rhynchites) lenaeus* FAUST, 1891 – Attelabidae; *Diplapion stolidum* (GERMAR, 1817), *Perapion (Perapion) oblongum* (GYLLENHAL, 1839), *Pseudoprotapion pseudelegantulum* (WAGNER, 1912) – Brentidae; *Bagous (Bagous) lutulentus* (GYLLENHAL, 1813), *Ceutorhynchus aeneicollis* GERMAR, 1823, *Chlorophanus caudatus* FÄHRAEUS, 1840, *Hexarthrum duplicatum* FOLWACZNY, 1966, *Neoprophinus cinnamomeus* (SCHULTZE, 1897), *Rhyncolus (Axenomimetes) heydeni* (FAUST, 1892), *Trachyphloeus (Trachyphloeus) alternans* GYLLENHAL, 1834 – Curculionidae; *Dasytes (Mesodasytes) nigroaeneus* KÜSTER, 1850 – Dasytidae; *Muzimes caucasicus* (MARĀN, 1940), *Mylabris (Micrabris) inculta* (ESCHERICH, 1899) – Meloidae; *Nemonyx lepturoides* (FABRICIUS, 1801) – Nemonychidae i *Loraspis frater* (MULSANT et REY, 1870) – Scarabaeidae.
